Field Listing :: Age structure

This entry provides the distribution of the population according to age. Information is included by sex and age group as follows: *0-14 years (children)*, *15-24 years (early working age)*, *25-54 years (prime working age)*, *55-64 years (mature working age)*, *65 years and over (elderly)*. The age structure of a population affects a nation's key socioeconomic issues. Countries with young populations (high percentage under age 15) need to invest more in schools, while countries with older populations (high percentage ages 65 and over) need to invest more in the health sector. The age structure can also be used to help predict potential political issues. For example, the rapid growth of a young adult population unable to find employment can lead to unrest.

Country

Age structure

[Afghanistan \(../geos/af.html\)](#)

0-14 years: 40.62% (male 7,562,703/female 7,321,646)
15-24 years: 21.26% (male 3,960,044/female 3,828,670)
25-54 years: 31.44% (male 5,858,675/female 5,661,887)
55-64 years: 4.01% (male 724,597/female 744,910)
65 years and over: 2.68% (male 451,852/female 528,831) (2020 est.)
